

IMC Networks

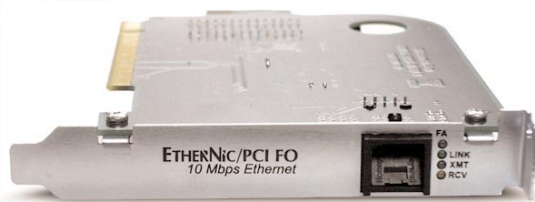

Simplify Fiber Connectivity and Reduce Costs With VF-45™ Solutions

Today's new, simplified, higher-density fiber optic connector styles represent an industry-wide trend toward fiber implementation. And once again IMC Networks is on the leading edge of providing these fiber connectivity solutions. 3M's™ newest Volition VF-45™ fiber connector, integrated into IMC Networks' NICs and Media Conversion products simplifies fiber connectivity projects, reduces connector costs, increases fiber port density, and reduces splicing complications.

IMC Networks is one of the first suppliers of 10 Mbps and 100 Mbps fiber products using the 3M™ VF-45™ low-cost fiber connector. End users and VARs specializing in Fiber-To-The-Desktop (FTTD) are capitalizing on first-to-market advantages by implementing IMC Networks' fiber NICs with 3M's™ VF-45™ solutions.

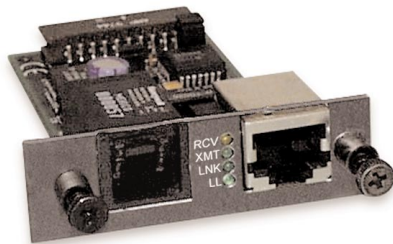

In most cases, pricing for new connector options will be lower than products with ST and SC connectors. Users should contact IMC Networks for pricing and availability.

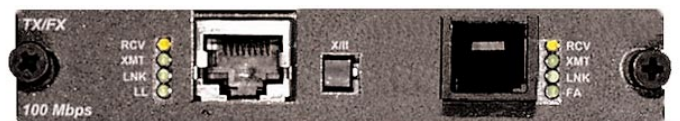

EtherNic®/PCI FO-VF
10 Mbps Ethernet NIC with VF-45™ support

QuikNic™, FX-VF
100 Mbps Ethernet NIC with VF-45™ support

McLIM™, TX/FX-VF
IMC Networks' popular 100 Mbps Ethernet twisted pair to fiber MediaConverter™ module with VF-45™ support

iMcLIM™, TX/FX-VF
SNMP-manageable, modular, 100 Mbps Ethernet twisted pair to fiber iMediaConverter™ module with VF-45™ support

IMC Networks currently offers a significantly wider range of fiber connectivity options than any other media converter vendor. IMC Networks' products reduce multivendor supply complications and reduce risks and associated costs. This expanded offering with VF-45™ connectors maintains IMC Networks' customer's expectations for variety and unprecedented freedom of choice.
