

Technical Overview

IMC iView² v.3.0
Software Release
Copyright 2002-2010

IMC Networks' iView² Version 3.0 is a Network Management System (NMS) for SNMP-based configuration and management for IMC chassis and module products. It is a web-based software application that allows customer access through a web browser. The software is similar to the current iView² v1.8.x desktop application, is downloadable and free of charge, via the IMC Networks website.

The iView² application has the following features:

- ❖ Configure IMC Networks products with manual discovery
- ❖ Operate, log and report SNMPv2 TRAPs
- ❖ Trap Management Reporting
 - Search function
 - Page through
 - Trap Details report using 'Binding Description' text and layout
- ❖ Can be used either as a distributed deployment with the database and server installed on separate hosts, or as a standalone deployment with the database, server and client installed on a single host
- ❖ Supports up to 100 concurrent users
- ❖ Supports up to 1,000 IMC Networks chassis
- ❖ Add or edit users with password and access restrictions
- ❖ Back-up and restore for configuration information and data

Requirements:

To store program information in a database, iView² Version 3.0 requires that a relational database management system such as MySQL be installed on the web server. The iView² Version 3.0 is a Java-based servlet application and requires a Java servlet container application (i.e., Apache/Tomcat) to be installed on the web server. Installation instructions for Apache/Tomcat and MySQL and either Microsoft Internet Explorer (Versions 6.x, 7.x, or 8.x) or Mozilla Firefox (Version 3.x) browsers can be found in the IMC Networks support documentation located on our website at [iView² Getting Started](#).

Only IMC Networks' products are compatible with iView² Version 3.0.

Note: *For more information, please refer to the respective datasheet for each product that iView² version 3.0 supports.*
